C19orf30 C19orf30 is a gene in humans. MeSH history The Medical Subject Headings (MeSH) are a controlled vocabulary for the indexing and searching of health information found in books, journal articles, and other electronic sources. This gene is in the undecaprenyl pyrophosphate synthetase protein family. Expression In mice, this protein is expressed in several tissues, including brain, liver, heart, lung, and skeletal muscle. In humans, the protein is expressed in colon, brain, heart, and liver. Evolution The fossil record shows that mammals have evolved from small, nocturnal, and insectivorous placental ancestors to large, diurnal and omnivorous members. Evolutionary pathways for these developmental changes involve both genetic and environmental factors. The study of gene expression is beginning to demonstrate that large numbers of genes are differentially expressed during these adaptations.
